

- codeReview
- positioning for deeply indented dtds (ie not in iv_mainPane)
 - I noticed one oddity when using the +/-: I added 2 list items to listfragment and i only filled in linktitle and description. i checked it in, then checked it back out. now when i add more list items using +/-, it only adds linktitle and description, not the 4 fields that should be there. do you know what might be going on? i can show you on Monday if this description is cryptic...
 - checkoutForView (like checkout without lock)
 - implement checkoutForView which is a GET without lock token
 - flag on fragment, iv_readonly = false;
 - from either active list or search can do a getForView
 - put into edit window (right side) without being able to modify
 - disable the checkin button for read only fragments
 - title bar include READ only "-- Read only --"
 - [weird cases:
 - [1 viewing fragment, now want to check it out, can't easily do it]
 - [2 if viewing fragment, then search and do a checkout, it will just go to existing fragment, which is still in read mode]
 - [3 test... with new icons]
 - Logout... prompt to unlock all checked out fragments or keep for editing
 - choose which to save locally
 - offline editing: dtd, save xml file, multimedia file, locktoken
 - on login fill in right side with locally saved fragments
 - 1. unlock unwanted fragments.
 - 2. save dtd & xml & multimedia files
 - offline editing without checking into server. use local dtds.
 - stale sessionID put up dialog for every SC_UNAUTHORIZED
 - show media file for browseLocal (eg, image) on browseLocal entry
 - publish info has 3 children: stylesheet is not properly indented
 - copy and create
 - search nresults print, results in message pane
 - captitalize font (and smaller) for table headings...
 - (tag1 | tag2)* method hasQualifier doesnt find model with () groupings
 - chuck button for audio fragment, checkoutForView
 - change login init file name ie "franklin_init.xml" -> "/login" ... synch with jeff
-
